(There is Boolean function $f(P, Q, \dots)$ with exactly this truth table). Any set of connectives with the capability to express all truth tables is said to be adequate. As Post (1921) observed, the standard connectives are adequate. We can show that a set S of connectives is adequate if we can express all the standard connectives in terms of S .

Programmers with the classical software engineering background need to learn more mathematics these days. The world is changing; we have to change, too. This book is dedicated to covering the issues that until recently were not very popular in software engineering: logic, monoids, algebraic structures, categories, and monads. All these topics are explained in the book, with no assumptions ...
