6-6. Suppose we are given the minimum spanning tree T of a given graph G (with n vertices and m edges) and a new edge $e = (u, v)$ of weight w that we will add to G . Give an efficient algorithm to find the minimum spanning tree of the graph $G + e$. Your algorithm should run in $O(n)$ time to receive full credit. Solution

Algorithm design takes time, and even simple algorithms can be surprisingly tricky to develop. We suggest reading over all the problems as soon as the problem set goes out so that you will have the time to play around with them over the course of the week. Work on your own before working in a group or attending office hours.
