Digestive Endoscopy - Wiley Online Library

Endoscopy is a nonsurgical procedure used to examine a person's digestive tract. Gastroenterologists use an endoscope, which is a thin tube attached to a light and camera, to view the inside of the digestive tract. There are two types, an upper endoscopy and a lower endoscopy, also called a colonoscopy. These two procedures scope out different parts of the digestive system and can help your doctor to check the health of these parts of your body.
