Solution. • (a) We write the series as $f(x) = \sum_{n=2}^{\infty} a_n x^n$ where $a_n = (1$ if n is prime, 0 if n isn't prime. • Then $|a_n x^n| \leq |x|^n$ for every $n = 2, 3, 4, \dots$. Therefore, if $|x| < 1$ the series converges by

Problems in RealAnalysis

Analysis is a profound subject; it is neither easy to understand nor summarize. However, Real Analysis can be discovered by solving problems. This book aims to give independent students the opportunity to discover Real Analysis by themselves through problem solving. The depth and complexity of the theory of Analysis can be appreciated by taking a glimpse at its

Let x be a real number. If $x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x < \epsilon$ and $x > -\epsilon$. To prove the inequality $x < \epsilon$, we prove $x < \epsilon$ for all positive ϵ .
