Unilateral castration did not give rise to any symptoms except a temporary diminution of libido in two cases. Complete castration, either by the simultaneous removal of both testes or by the removal of a single remaining gland, produced nervous and vasomotor disorders as early as the third day after operation. Nervousness was a major complaint ...

But in humans, results have been mixed as to whether castration lengthens life span. One study on patients in a mental hospital found that it does, while another on castrated and non-castrated male singers found that it does not. Nevertheless, researchers have theorized that testosterone's effects may be the reason
